Ideal job

My ideal job is teaching young children of kindergarten. It's so much fun teaching children of this age because they are a breath of fresh air for me and especially the kind of energy and freshness they have and the willingness to try and experiment new things and the curiosity to explore the world and learn new things is really great and fun for me to experience.

One of the most common activities in teaching kindergarten children is teaching them how to color. I think that children are the natural scientists and are the natural learners and this is the best thing about them. It is not necessary that everything should be taught to them but in fact they learn 70% of the things from their surroundings and the environment they live in.

The best part of this job and the fun in teaching younger children is that they spend much of their time and energy exploring the world around them and teaching them the areas of their own culture i.e. language, stories, music, etc. is the best for me to experience.

Another activity that is best for the children is that they can easily grasp with all their senses and emerging skills what the teachers are speaking to them about, when certain behaviors are appropriate and when they should refrain from certain behaviors, where things come from and what they are for etc. For example, kindergarten children can undertake projects in which they investigate a real event or object.

I think the best activity that I enjoy in this job is to provide the children the opportunity to learn by observing and experimenting with real objects. They should be given a chance to observe things around them. For example I would like to take the children to outdoor excursions and provide them with an opportunity to observe the things around them. Let's say a little girl asks me about the shapes of two different leaves so I can prepare an activity for them out of this question and teach the class that there are many kinds of trees, that they are all the same in some ways and that they are all different in some ways.

Incorporating technology in teaching children is also the best aspect of teaching children today and enhancing their skills. Instead of only making them to read and write while using text books and manual pencils they can also be taught how to write via using computers. One of the first lessons on computer that I would like my children to learn is how to use the pencil and write their name. They learn to change the color and the width of the line they are writing with. This also gives them experience using the mouse. Using these skills later on the children can also learn how to draw shapes and color them on the computer which would in turn, turn out to be beneficial for them in the future.

I believe that teaching children of this age is the job of the utmost responsibility and has tremendous impact on their future, their family and overall the society. The reason why I have this belief is because, this is the age when children start to learn and build their basics and start with make their first step in education field. Teaching them the right thing in the right manner, which not only make them learn what they are taught but also builds their temperament, their aptitude towards studies, their responsibility and behavior towards other people, their basics in education, and most importantly their character and personality makes it a job of utmost responsibility. At this stage the teacher is not only teaching a child but is preparing a citizen for future.
